THREONINE SYNTHASE.

PYRIDOXAL PHOSPHATE.

A -> L (IN REF. 3).

-> L (IN REF. 3). B27787A57B882AD0 CRC64;

PROSITE: PS00165; DEHYDRATASE\_SER\_THR: 1.
Threonine bicsynthesis; Lyase; Pyridoxal phosphate;
Chloroplast; Transit peptide: 3D-structure.
TRANSIT 1 40 CHLOROPLAST.
TRANSIT 1 40 THREONINE SYNTHASE.
CHAIN 41 526 THREONINE SYNTHASE.
BINDING 203 203 PYRIDOXAL PHOSPHATE.
BINDING 203 203 A -> L (IN REF. 3).

Allosteric enzyme.

REPHOJ. 17.384-395(1998)

C1 - FUNCTION: INDUCES APOPTOSIS. ISOFORM BIML IS MORE POTENT THAN

LSOFORM BIMEL.

C2 - SEGUENT'S FORUS HETERODINERS WITH A NUMBER OF ANTIAPOPTOTIC BCL-2

PROTEINS INCLUDING MCL-1, BCL-2, BCL-XL, BAD BHRF-1. DOES

NOT HETERODINERSIZE WITH PROAPOPTOTIC PROTEINS SUCH AS BAD, BOK,

BAX OR BAK (BY SIMILARITY)

C3 - SUBCELLULAR LOCATION: ASSOCIATED WITH INTRACYTOPLASMIC MEMBRANES

C4 - SEGUENTIARITY PROAPOPTOTIC SHOWN HERE) AND

C5 - STATILARITY PROADOUCED BY ALTERNATIVE SPLICING.

C6 - STATILARITY BH3 DOMAIN IS REQUIRED FOR BCL-2 BINDING AND

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

New peptide conjugates for modulating apoptosis or for inhibiting B

```
The invention relates to a peptide conjugate having the formula:

(C (R*X)n*peptide where n = 1-10; X = C-0, when the R*X group is attached to the *t-terminus of the peptide, or a side chain of the peptide where c the functional group of the side chain is NH2 or OH; or X = 0 or NH.

CC when the R*X group is attached to the C-terminus of the peptide, or a side chain of the peptide, where the side chain functional group is COOH.

CC or COOH2: and R = 2-16c alkyl or alkoy, 2-14c alkylenyl containing one or two double bonds, cyclobutyl. cyclobertyl. cyclobertyl one of the peptide or a cook of the peptide of a cook of the peptide of a cook of the peptide of a l-5C straight or branched chain alkyl group, phenyl potionally monosubstituted with a 1-5C straight or branched chain cook of the peptide of the conjugate The peptides represent examples of the peptide of the conjugate and the conjugate is cook of the peptide of the conjugate and the conjugate is useful for modulating apoptosis in the cells of a subject, or for cook of the coll that the peptide conjugate is useful for modulating apoptosis in the cells of a subject. The peptide conjugate is conjugate afflicted with a cancer characterized by cancer cells that conjugate is subject afflicted with a cancer interactive discovers a guitable conjugate is acute or chronic lymphocytic and non-lymphocytic leukemia. The peptide conjugate is acute or chronic lymphocytic and non-lymphocytic leukemia. The peptide conjugate is acute or chronic lymphocytic and non-lymphocytic leukemia. The peptide conjugate is acute or chronic lymphocytic and non-lymphocytic leukemia. The peptide conjugate is acute or chronic lymphocytic and non-lymphocytic leukemia. The peptide conjugate is acute or chronic lymphocytic and non-lymphocytic leukemia. The peptide conjugate is acute or chronic lymphocytic and non-lymphocytic leukemia. The peptide conjugate is acute or chronic lymphocytic and non-lymphocytic leukemia. The peptide conjugate is acute or chronic lymphocytic and non-lymphocytic leukemi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ouery Match 100.0%; Score 138; DB 21; Best Local Similarity 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a peptide conjugate having the formula:

(C (R*)n*peptide where n = 1.0; X = C=0, when the R*X group is attached to the N*-terminus of the apptide, or a side chain of the peptide where the functional group of the side chain is NH2 or OH; or X = 0 or NH.

CC when the R*X group is attached to the C-terminus of the peptide, or a side chain of the peptide, where the side chain functional group is COOH or CONH2; and R = 2.10c alkyl or alkoxy, 2.14C alkylay() containing one or two double bonds, cyclobutyl, cyclopentyl, cyclopentyl, cyclobexyl potionally come of the consubstituted with a 1.5C straight or banched chain alkyl group, or benzyl in the peptides AhagyOOL-BYOSB represent analogues of the peptide portion of the conjugate The peptides represent analogues of a Bcl-2 superfamily polypeptide corresponding to amhan acids 72-97 of the BH domain of the cell death agonist Bad. The peptide conjugate is conjugate is useful for medulating apoptosis in the cells of a subject, or for creversing B cell lymphomalethemia 2 (Bcl-2)-mediated blockage of apoptosis in cancer cells. It is also useful for inhibiting Bcl-2 subject afflicted with a cancer characterized by cancer cells that consumption in particular, the peptide conjugate is useful for treating a subject afflicted with a cancer characterized by cancer cells that conjugate is also useful for treating disorders and apoptosis, e.g. neurobject leakens. The apptide conjugate is also useful for treating disorders characterized by increased apoptosis, e.g. neurobject disorders acquired conjugate is also useful for treating disorders characterized by increased apoptosis, e.g. neurobject disorders characterized by conjugate is also useful for treating disorders characterized by the conjugate is also useful for treating disorders characterized by conjugate is also useful for treating disorders characterized by the conjugate is also useful for treating disorders disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

CC (RAyn. repetide where n = 1-10; X = C=0, when the RAY group is attached to the N-terminus of the peptide, or a side chain of the peptide where to the functional group of the side chain is NH2 or OH; or X = C of the functional group of the side chain is NH2 or OH; or X = O or NH.

CC when the RAY group is attached to the C-terminus of the peptide, or a side chain of the peptide, where the side chain functional group is COOH or CONH2; and R = 2-18c alxyl or atknoy, 2-14C alxylaryl containing one or town double bonds, cyclobutyl, cyclopentyl, cyclopentyl, cyclopentyl, optionally composition of the C-terminus of the peptide, or a cyclopentyl optionally monosubstituted with a 1-5C straight or branched chain alxyl group, or benzyl optionally monosubstituted with a 1-5C straight or branched chain alxyl group, or benzyl optionally monosubstituted with a 1-5C straight or branched chain alxyl group, or benzyl optionally monosubstituted with a 1-5C straight or branched chain alxyl group, or benzyl management of the conjugate or the peptide conjugate is useful for management of the conjugate is not a subject or for the peptide conjugate is useful for treating apoptosis in cancer cells: It is also useful for Inhibiting Bel-2 subject afflicted with a cancer characterized by cancer cells that cancer chronic lymphocytic and non-lymphocytic leukemia. The apptide conjugate is assisted apoptosis, e.g. neurodegenerative disorders acquired increased apoptosis, e.g. neurodegenerative disorders acquired infarction.

                                                                                                                                                                                                                                                                                                                                                                  Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a peptide conjugate having the formula:

(C (R-)n repetide where n = 1-10; X = C-0, when the R-X group is attached to the N-terninus of the peptide, or a side chain of the peptide where the functional group of the side chain is NH2 or 0; or NH, considering the peptide where the side chain is NH2 or 0; or NH, considering the peptide or considering the peptide, where the side chain (inctional group is attached to the C-terninus of the peptide, or a side chain of the peptide, where the side chain (inctional group is considering one or two double bonds, cyclobuty). cyclopenty), cyclopenty), cyclopenty, cyclopenty,
                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

The present invention describes an isolated or synthetic polypeptide (I) complising a less than full length amino acid sequence of a mutant (I) complising a less than full length amino acid sequence of a mutant (I) complising a less than full length amino acid sequence of a mutant (I) thick contains amino acid substitutions at SerilB of a human for the sequence of the contains amino acid substitutions at SerilB of a human contains a murine BAD) contains a murine BAD (Anger murine BAD) or SerilJ of a murine BAD (Anger murine BAD) or SerilJ of a murine BAD (Anger murine BAD) or SerilJ of a murine Can be used as an apoptosis inducer or inhibitor. BAD polypeptides and crus series and series and containt of the series include containt of the series and containt of the ser Sequence 162 Ą

bcl-x(L)/bcl-2 associated death

promoter protein.

Epitope; murine: bcl-x(1)/bcl-2 associated death promoter; Bad; spolypeptide; bcl-x; cell death, regulate; BHI; BHI; apoptotic cel cytokine deprivation; IL-3 dependent cell line; Kmmunodeficiency; cell death; ncy; AIDS: stroke;

```
This sequence represents the murine bcl-x(L)/bcl-2 associated death (CC promoter (Bad) gene. Bad is a 22.1 kD protest which interacts with bcl-2 and bcl-x protests and regulates cell death. It has homology to to the bcl-2-related family clustered in the BHI and BH2 domain. Bad that been found to hybridise to bcl-x(L) and bcl-2 in youst two-hybrid castalys and in vivo in manmallan cells. Overexpressed Bad counters the countering the death inhibitory activity of bcl-x(L), but is much less effective at countering the death inhibitory activity of bcl-x(L). Bad expression can acclerate apoptotic cell the structure of bcl-x(L), but is much less effective at 1.3 dependent cell line expressing bcl-x(L), and its also counters the cell death repressor activity of bcl-x(L). Bad competes with Bax for binding to bcl-x(L). Bad any be used to learning sense which inhibit its binding to bcl-2 or bcl-x(L) to form heterodimers. Such agents may be used to learning sense which inhibit its binding to bcl-2 or bcl-x(L) to form heterodimers. Such agents may be used to learning sense which inhibit its binding to bcl-2 or bcl-x(L) to form heterodimers. Such agents may be used to learning sense sense yet and the sense of the sense of

New mutant BAD polypeptide with phosphorylatable serine replaced useful for, e.g. treating reduced apoptosis such as in cancer or viral infection

The present invention describes mutant BAD (BCI-XL/BCI-2 associated cell classified regulator) procesns, having an amino acid other than Ser at C position 112 and/or 136. relative to the murine BAD 204 as sequence. The C present sequence is the murine BAD protein. Also described are: (1) CC fusion proteins of mutant BAD protein able to decrease cell viability; (2) CC fusion proteins of mutant BAD protein able to decrease cell viability; (2) to resease intracellular delivery, mutant BAD proteins are used to treat C or prevent diseases associated with reduced apoptosis, e.g. concerviral inferention, hymphoproliferation, arthritis, infertility.

CC viral inferction, hymphoproliferation, arthritis, infertility.

CC inflammation and autoimmune disease. Polymputeotide sequences encoding that BD proteins can be used similarly by gene therapy or to produce transgenic enimals for use as disease models or in drug screening. BAD communed to service application of the second of the second in the specific fear are used to screen for enhancers and inhibitors of serime-phosphatase. Inhibitors are potentially useful in treatment of excessive applications such as ADDs, neurodepeneration, againg or ischemic cell death. The appoints such as ADDs, neurodepeneration, againg or ischemic cell death. The appoints status of cells is considered and non-phosphorylated by measuring relative amounts of phosphorylated and non-phosphorylated by measuring relative amounts of phosphorylated and non-phosphorylated with BCL 2 or BCL-XL but instead binds to 14-3-3 family corrections in the cytosol. thus promoting cell survival. The mutants with the companies of the cytosol. Thus promoting cell survival. The mutants with the companies with BCL 2 or BCL-XL but instead binds to 14-3-3 family contents in the cytosol. Thus promoting cell survival. The mutants with

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes mutant BAD (BCL-XL/BCL-2 associated cell classes) required by metalis, having an amino acid other than Ser at CC position 112 and/or 136, relative to the mutine BAD 204 as sequence. The position 112 and/or 136, relative to the mutine BAD 204 as sequence. The CC present sequence represents a mutant BAD protein Aiso described are: (1) CC fusion proteins of mutant BAD protein able to decrease cell viability; (2) Cf fusion proteins of mutant BAD protein able to decrease cell viability; (2) concerving infertion; hyphoproliferation, arthritis, infertility.

CC prevent diseases associated with reduced apoptosis, e.g. cancerviral infertion and autolemnue disease. Polynucleotide sequences encoding mutant BAD proteins can be used stainarly by gene therapy or to produce transgenic animals for use as disease models or in drug screening. BAD contents can be seed in treatment of excessive applicate such as AIDs, neurodespencration, additional intentment of excessive applicate such as AIDs, neurodespencration, adjing or ischmenic cell death. The apoptotic status of cells is content death. Phe apoptot
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                                                                                                                                                                                                                                                       The present invention describes mutant BAD (BCL-XL/BCL-2 associated cell clearly regulator) proteins, having an amino acid other than Ser at CD position [12] and/or 136, relative to the mutine BAD 204 as sequence. The CD position [12] and/or 136, relative to the mutine BAD 204 as sequence. The CD present sequence represents a mutant BAD protein. Also described are: [1] CC fusion proteins of mutant BAD protein able to decrease cell viability; [2] CC fusion proteins are used to treat cor prevent diseases associated with reduced apoptosis, e.g. concer, curial infection, lymphoproliferation, arthritis, infertility.

CC viral infection and autoimmune disease. Polymucleotide sequences encoding mutant BAD proteins can be used similarly by gene therapy or to produce transpents animals for use as disease models or in drug screening. BAD cortains phosphorylated at specified Ser are used to screen for enhancers and inhibitors of service phosphatuse. Thibitors are potentially useful in treatment of excessive apoptosis such as ADDs, neurodegeneration, caping or ischaemic cell death; The apoptosis such as ADDs neurodegeneration of determined by measuring relative amounts of phosphorylated and non-phosphorylated and hop-phosphorylated and product that does not phosphorylated with BCL-2 or BCL-XL but instead blands to 14-3-3 family corporations in the cyclosol, thus promoting cell survival. The mutants with the cyclosol, thus promoting cell survival. The mutants with constituted cannot bind 14-3-3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New mutant BAD polypeptide with phosphorylatable serine replaced useful for, e.g. treating reduced apoptosis such as in cancer or viral infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 7; Page 60-61; 95pp; English

Serine-phosphorylated BcJ-X-1/Bcl-2 Associated cell Death regulator polypeptide - useful for modulation of apoptosis associated with, e.g. cencer and immunodeficiency diseases

This sequence represents a novel serine-phosphorylated protein, RAD (BCL XI/BCL 2 associated cell death regulator). The serine residue is phosporylated in a post translational modification and allows binding to the 14-3-3 protein which is a signal translation and allows binding to the 14-3-3 protein which is a signal translation expending the phosphorylated BAD, which act through inhibition/activation of a phosphosetine phosphatase, are useful for preventing/treating increased/apercased apoptosis may result from immunodeficiency diseases, senescence, neurodegenerative disease, isohaemic cell death, reperfusion cell death, infertility and wound-healing. Decreased apoptosis may result from cancer, viral infearchm, upphoproliterative conditions, arthritis, infertility. Inflammation and aucoimmuse diseases. Measuring the amount of phosphorylated compared to unprosphorylated BAD polypeptide and/or total phosphorylated compared to upprosphorylated BAD polypeptide and/or total phosphorylated compared to upprosphorylated BAD polypeptide and/or total phosphorylated compared to upprosphorylated BAD polypeptide and/or total

BAD polypeptides and con be used as an apoptosis inducer or inhibitor. BAD polypeptides are polymucleotides can be used (or screening candidate compounds and drugs for activity that promote cell survival or apoptosis. Other uses include inducing or inhibiting apoptosis in a cell. Candidate compounds inducing or inhibiting apoptosis in a cell. Candidate compounds (dentified and (mutant) BAD polypeptides are useful in treating immunodeficiency diseases, neurodegenerative diseases, ischaemic cell canthomic diseases. The present sequence represents a specifically coloration and autoinmune diseases. The present sequence represents a specifically cells and colorative conditions, arthritis, infertiley, infarmation and autoinmune diseases. The present sequence represents a specifically cells and colorative conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

modifying fusion protein comprising gade sequence of Bad-DTTR apoptosis-
modifying fusion protein comprising gade gene sequence fused via a short
linker to diphtheria toxin transiocation domain (DTTR). The
transicational apoptosis-modifying fusion protein is capable of binding a
cutarget cell and integrating into or crossing a cellular membrane of the
transic cell and integrating into or crossing a cellular membrane of the
transic cell and the spotosis-modifying fusion protein comprises at least
two domains: the DTR domain, which targets the fusion protein to the
transic cell. The fusion protein is useful for modifying
of the target cell. The fusion protein a target cell, such as neuron,
full transic cell. The fusion protein is useful for modifying
cell, thibiting or enhancing) apoptosis in a target cell, such as neuron,
full transic cell. The fusion protein is useful for reducing
cell, the protein cell or an adipocyte. It is also useful for reducing
the protein cell cell or an adipocyte. It is also useful for reducing
cells in a subject after transient ischemic neuronal injury,
cell apoptosis in a subject after transient ischemic neuronal injury,
cells in a subject after transient ischemic hibbition or enhancement
cell activity spinal cord injury. The fusion protein may be used to treat
cell activity spinal cord injury ornditions through inhibition or enhancement
cell activity spinal cord injury ornditions through inhibition or enhancement
cell activity spinal cord injury. The fusion protein can be delivered
cell scancers. The apoptosis modifying fusion protein can be delivered
cell scancers. The apoptosis modifying fusion protein can be delivered
cell scancers. The apoptosis modifying fusion protein can be delivered
cell scancers. The apoptosis modifying fusion protein can be delivered
cell scancers. The apoptosis modifying fusion protein can be delivered
cell scancers. The apoptosis modifying fusion protein can be delivered
cell scancers. The apoptosis of the cell grave has a considered to selective tissue a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel fusion protein for modifying apoptosis in target cell and reducting apoptosis after transient ischaemic neuronal injury, has two domains which targets protein to a cell and modifies apoptotic response of cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Key

The sequence is disclosed as being a protein called BRG6 which regulates' cell death through interaction with Bcl-2. The DNA may be used for the production of the recombinant protein, which can be used in unspecified therapeutic or dispressive procedures, as a molecular weight marker, and to relies antibodies that can be used in unspecified disprostic or therapeutic applications and to reduce or eliminate the biological activity of the BBC6 protein in vivo.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence

Description

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

             TISSUB-EASTAIN, and Thymus; 184748; MEDLING-953651; PubMed; 1948; Yang E. Zhan J. Jookel J. Boise L. Yang E. Zhan J. Jookel J. Boise L. Padd, a heterodimeric partner for B promotes cell death; cell 81:28-29.(1955).
"14-3-3 protedins and survival kinases cooperate to inactivate BAD by BH3 domain phosphorylation.";

Wol. Cell 6:41-51(2000).

1- FUNCTION: Promotes cell death. Successfully competes for the binding to Bel-K(L), Bcl-2 and Bcl-w, thereby affecting the level of heterodimerization of these proteins with BAX. Can reperse the death repressor activity of Bcl-x(l), but not that of Bcl-2, appears to act as a link between growth factor receptor signaling and the apoptotic pathways.

1- SUBJNIT: Forms heterodimers with the anti-apoptotic proteins, Bcl-x(l), Bcl-2 and Bcl-w. Also binds protein 5100AlO (By similarity). The Ser-112/Ser-136 phosphorylated form binds 14-3-3 proteins.

1- SUBJNIT: Forms heterodimers with the anti-apoptotic proteins.

1- SUBJNIT: Forms heterodimers with the anti-apoptotic proteins.

1- SUBJNIT: Forms heterodimers with the Bcl-2 family.

1- SUBCELGUAR LOCATION: Outers mitochondrial membrane. Upon phosphorylation, locates to the cytoplasm.

1- DAMAIN: Intact BH3 domain is required by BIK, BLD, BAK, BAD AND PAR Anti-apoptotic members of the Bcl-2 family.

1- SUBJNIT: Anti-apoptocic members of the Bcl-2 family.

1- SUBJNIT: Anti-apoptocic members of the Bcl-2 family.

1- SUBJNIT: Anti-apoptocic members of the Bcl-2 family.

1- Subsequent phosphorylation on Ser-135 promotes heterodimerization with 14-3-9 proteins. This interaction then facilitates the phosphorylation at Ser-155, a site within the BH3 domain, leading to the release of Bcl-x(L) and the promotion of cell survival.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       MOUSE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               444444444

Princtional characterization of two splice variants of rat BAD and Richard interaction with Bcl.w. in sympathetic neurons.';
RL Mol. Cell. Reurosci. 17.97-106(2001).

C. Interaction with Bcl.w. in sympathetic neurons.';
RL Mol. Cell. Reurosci. 17.97-106(2001).

C. Interaction of the second process of Bcl.2 (By cl. and process).

C. Interaction of these proteins with BAX. Can reverse the death repressor activity of Bcl.2 (By similarity). Appears to act as a link between growth factor receptor signaling and the appoint of proteins. Bcl. (I), Bcl.2 and Bcl.w. Also binds protein Sl00A10. The Ser-13.95er-137 phosphorylated form binds 14.3-3 proteins.

C. Interaction locates to the cycopiasm (By similarity).

C. Interaction phosphorylation specific process of the bcl.2 (By similarity).

C. Interaction locates to the cycopiasm (By similarity).

C. Interaction by alternative splicing. They differ only in their compositions of the brain. Testricted to produced by alternative splicing. They differ only in their compositions of the brain. Testricted to produce by alternation death in the brain. Testricted to phosphorylation at Ser-133 in required by BIK, BID, BAK, BAD AND BAX for their pro-apoptotic members of the Bcl.2 family.

C. Interaction at Ser-136, a site within the BH3 domain, leading to the release of Bcl.x(L) and the promotion of cell survival.

C. Interaction at Ser-136, a site within the BH3 domain, leading to the release of Bcl.x(L) and the promotion of cell survival.

C. Interaction at Ser-136, a site within the BH3 domain, leading to the release of Bcl.2 (L) and the promotion of cell survival.

                                                                                                                                                                                                                                                                                                                                                               FUNCTION: Promotes cell death. Successfully competes for the binding to Bcl-x(L), Bcl-2 and Bcl-w, thereby affecting the level of beterodimerization of these proteins with BAX. Can reverse the death repressor activity of Bcl-x(L), but not that of Bcl-2 (By similarity). Appears to act as a link between growth factor
DOMAIN: Intract BB3 domain is required by BIK, BID, BAK, BAD AN BAX for their pro-apoptotic activity and for their interaction with anti-apoptotic members of the Bcl-2 family.
                                                                                                                                     SUBCELLULAR LOCATION: Outer mitochondrial membrane. phosphorylation, locates to the cytoplasm.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ب
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Subsequent phosphorylation on Ser-99 promotes heterodimeritative with 14-3-3 proteins. This interaction them facilitates the phosphorylation at Ser-118, a site within the BH3 domain, lead to the release of Bcl-x(L) and the promotion of cell survival. Ser-99 is the major site of AKT/PKB phosphorylation, Ser-118 to major site of protein kinase A (CAPK) phosphorylation (by similarity). CONTAINS 1 BCL-3 HOMOLOGY DOMAIN 3 (BH3).

SIMILARITY: BELONGS TO THE BCL-2 FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              PTM: Phosphorylated on Ser-
